Scheme & Syllabus

IV Year- VII & VIII Semester: B. Tech. (Electronics Instrumentation & Control)

## 7EI5-11: Distributed Control System (Program Elective-3)

**Credit: 3**

**Max. Marks: 150(IA:30, ETE:120)**

**3L+0T+0P**

**End Term Exam: 3 Hours**

SN	Contents	Hours
1	INTRODUCTION: Objective, scope and outcome of the course.	1
2	INTRODUCTION- Hierarchical organization for a process computer control and computer system structure for a manufacturing complex. Centralized and distributed control concept. Lower level and higher level computer tasks and duties. Functional requirement of DPCS. Aims of plant automation and distributed computer control systems and subsystems. DPCS system configuration and integration with PLCs and computers.	9
3	ARCHITECTURE- Overviews of DPCS, systems architectures, data base organization. DPCS elements, comparison of different DPCS systems, state of the art in DPCS, configuration of control unit, different cards (I/O, O/P, Memory, PLC etc) system implementation concepts, work stations and its key – functions and function chart.	8
4	DCS DISPLAYS- Standard and user defined displays, continuous process display, Ground display, overview display, detail display, graphic display, trend display, loop display, alarm summary display, annunciator display, batch/ sequence display, tuning display, tuning panel, instrument faceplate.	6
5	DATA COMMUNICATIONS LINKS AND PROTOCOL - Communication Hierarchy (point to point to field bus) Network requirements, ISO reference model. Transmission media, network topologies, internetworking, data transmission, bus access methods, error handling Field buses, MAP and TOP Protocols. Features and capabilities of various field buses. FB standardization, comparison of MODBUS, PROFIBUS and FIPBUS, HART protocol, IEEE project 1002 on LAN implementation.	9
6	DCS CONTROL FUNCTIONS- control unit, sequential control, system maintenances, utility, switch instrument, batch system builder, graphic builder, feedback control builder, security, and process reporting function.	7
	<b>Total</b>	<b>40</b>

## 7EI5-12: Wireless Sensor Network (Program Elective-3)

Credit: 3  
3L+0T+0P

Max. Marks: 150(IA:30, ETE:120)

End Term Exam: 3 Hours

SN	Contents	Hours
1	Introduction: Objective, scope and outcome of the course.	1
2	Introduction to Sensor Networks, unique constraints and challenges, Advantage of Sensor Networks, Applications of Sensor Networks, Types of wireless sensor networks Mobile Ad-hoc Networks (MANETs) and Wireless Sensor Networks, Enabling technologies for Wireless Sensor Networks.	10
3	Issues and challenges in wireless sensor networks Routing protocols, MAC protocols: Classification of MAC Protocols, S-MAC Protocol, B-MAC protocol, IEEE 802.15.4 standard and ZigBee, Dissemination protocol for large sensor network.	8
4	Data dissemination, data gathering, and data fusion; Quality of a sensor network; Real-time traffic support and security protocols.	6
5	Design Principles for WSNs, Gateway Concepts Need for gateway, WSN to Internet Communication, and Internet to WSN Communication.	8
6	Single-node architecture, Hardware components & design constraints, Operating systems and execution environments, introduction to TinyOS and nesC.	7
	<b>Total</b>	<b>40</b>

### Text/Reference Books:

## Scheme & Syllabus

IV Year- VII & VIII Semester: B. Tech. (Electronics Instrumentation & Control)

### 7EI4-21: Real Time Control Lab

Credit: 2

Max. Marks: 100(IA:60, ET 40)

OL+OT+4P

SN	Contents
1	Introduction: Objective, scope and outcome of the course.
2	Characteristics of control valve
3	Closed loop response of flow control loop.
4	Closed loop response of level control loop
5	Closed loop response of temperature control loop
6	Operation of on-off controlled thermal process. Response of on-off controller
7	Response of P+I+D controller. Tuning of PID controller
8	Measurement & Control of level using PID.
9	Measurement & Control of flow using PID
10	Measurement & Control of pressure using PID.
11	Measurement & Control of flow using PLC.
12	Measurement & Control of level using PLC.
13	Measurement & Control of temperature using PLC.
14	Measurement & Control of pressure using PLC.
15	Using SCADA for process control: <ul style="list-style-type: none"><li>• preparation of process graphics</li><li>• tagging trends</li><li>• reporting</li><li>• process monitoring and control</li></ul>
16	Study of Communication and Configuration of HART Field Devices: <ul style="list-style-type: none"><li>• Communicate with HART device</li><li>• Re-ranging of HART Field Devices</li><li>• Basic setup of HART Device</li><li>• Detailed setup of HART Device</li></ul>
17	Study of Process Calibrator: <ul style="list-style-type: none"><li>• Test &amp; Calibration of Process Indicators &amp; Controllers using</li><li>• Resistance, RTD, Thermocouple</li><li>• mili Volts, 4-20 mA,</li><li>• Frequency &amp; Volt</li><li>• Error calculation.</li></ul>
18	Study of thermal Imager: Non-contact type temperature measurement of Process, Machines, Material etc.
19	Study of Vibration Analyzer: Measurement and Analysis of vibration in electrical and mechanical machines.
20	Familiarization with the Instrumentation and Process Control Training System (IA- FLTP): Process Workstation, Instrumentation Workstation, PID Controller, ON/OFF Controller, Programmable Logic Controller, Signal Isolator, Flow Meter, Level Transmitter, Temperature Sensor, Emergency Push-Button, Pneumatic Unit, Trend Recorder, Pressure Gauge, Pressure Transmitter, Pneumatic Control Valve, Accessories, Basic Setup.
21	I.S.A. Standard and Instrument Symbols. Introduction to Measurement instruments.
22	Study of Interacting systems and Non-interacting systems.

## Scheme & Syllabus

IV Year- VII & VIII Semester: B. Tech. (Electronics Instrumentation & Control)

**PART-B**  
**Attempt**  
**any**  
**four**  
**experim**  
**ent**

1. Find all the code words of the (15,11) Hamming code and verify that its minimum distance is equal to 3.
2. Generate an equiprobable random binary information sequence of length 15. Determine the output of the convolutional encoder shown below for this sequence.

3. Generate the L=31 Gold sequences. Consider a time-synchronous CDMA system (direct sequence spread spectrum) having four users, each employing a distinct Gold sequence of length L=31 and the binary ( $\pm 1$ ) modulation of their representative Gold sequences. The receiver for each user correlates the composite CDMA received signal, which is corrupted by AWGN (added on a chip-by-chip basis) with each user's respective sequence. Using 10000 information bits, estimate and plot the probability of error for each user as a function of SNR.
4. Consider a MIMO (multiple-input, multiple-output) system with  $N_T = 2$  transmit antennas and  $N_R = 2$  receive antennas. Generate the elements of the channel matrix  $\mathbf{H}$  for a Rayleigh fading (frequency nonselective) AWGN channel and the corresponding inputs to the detectors for the two receive antennas.
5. Perform feature extraction from a given Image and use Principal Components as image descriptors.
6. By using an image dataset, train a Neural Network to recognise a given Image. Apply this in context to face/object recognition and calculate recognition accuracy of the training set.
7. Develop a Fuzzy Inference System (FIS) by using a set of fuzzy rule base between some key image parameters and calculate output after defuzzification.
8. Design a Fuzzy PID controller using Matlab for a Dc Motor.
9. Classify ECG signals using Neural networks.

Scheme & Syllabus

IV Year- VII & VIII Semester: B. Tech. (Electronics Instrumentation & Control)

## 7EI4-23: Optical Instrumentation Lab

Credit: 1

Max. Marks: 50 (IA:30, ETE:20)

OL+OT+2P

SN	Contents
1	Introduction: Objective, scope and outcome of the course.
	Hardware based experiment;
2	To set up Fiber Optic Analog and fiber Optic Digital link.
3	Measurement of Propagation loss and numerical aperture.
4	Measurement of optical power bending loss in a plastic optical fiber.
5	Study and measure characteristics of fiber optic LED's, LDR and Laser diode.
6	OTDR Measurement of Fiber Length, Attenuation and Dispersion Loss.
	<b>Software based experiment:</b>
7	Design and simulate of single and multimode transmission in optical fiber system.
8	Show and simulate the optical system performance analysis using Eye diagram and measure the value of Q-factor & BER of optical signals.
9	Study and simulate the linear and parabolic waveguide structure use in optical fiber communication.
10	Design and simulate the Dispersion compensators for fiber optic communication.
11	Design and calculate the power budget for optical communication link.
12	Design and simulate the DWDM and WDM techniques use in optical communication.
13	Design and simulate the Fiber Bragg grating and find its transmission characteristics and optical band-gap.

### 8EI5-12: Process Modelling & Optimization (program elective-4)

Credit: 3

Max. Marks: 150(IA:30, ETE:120)

3L+0T+0P

End Term Exam: 3 Hours

SN	Contents	Hours
1	Introduction: Objective, scope and outcome of the course.	1
2	Definition of process model, physical and mathematical modeling, deterministic and stochastic process, classification of models, model building, black-box model, white box model, gray model, classification of mathematical methods.	6
3	Mathematical models of chemical engineering systems: Introduction, uses of mathematical models, scope of coverage, principles of formulation, fundamental laws, continuity equations, energy equations, equation of motion, transport equation, equation of state, equilibrium, kinetics. Examples of mathematical models of chemical engineering systems	8
4	The nature and organization of optimization problems: Scope and hierarchy of optimization, examples of applications of optimization, the essential features of optimization problems, general procedure for solving optimization problems, obstacles to optimization.	7
5	Developing models for optimization: Classification of models, selecting functions to fit empirical data, factorial experimental designs, degrees of freedom, formulation of the objective function. Basic concepts of optimization: Continuity of function, NLP problem statement, convexity and its applications, interpretation of the objective function in terms of its quadratic approximation, necessary and sufficient conditions for an extremum of an unconstrained function.	8
6	Optimization of unconstrained functions: One-dimensional search numerical methods for optimizing a function of one variable, scanning and bracketing procedures, Newton and Quasi-Newton methods of uni-dimensional search, polynomial approximation methods, how one-dimensional search is applied in a multidimensional problem, evaluation of uni-dimensional search methods. Application of optimizations: Examples of optimization in chemical processes.	10

## Scheme & Syllabus

IV Year- VII & VIII Semester: B. Tech. (Electronics Instrumentation & Control)

### 8EI4-21: IOT Lab

0L+0T+2P

#### LIST OF PRACTICALS

1.	Study the fundamental of IOT softwares and components.
2.	Familiarization with Arduino/Raspberry Pi and perform necessary software installation.
3.	To interface LED/Buzzer with Arduino/Raspberry Pi and write a program to turn ON LED for 1 sec after every 2 seconds.
4.	To interface Push button/Digital sensor (IR/LDR) with Arduino/Raspberry Pi and write a program to turn ON LED when push button is pressed or at sensor detection.
5.	To interface DHT11 sensor with Arduino/Raspberry Pi and write a program to print temperature and humidity readings.
6.	To interface motor using relay with Arduino/Raspberry Pi and write a program to turn ON motor when push button is pressed.
7.	To interface OLED with Arduino/Raspberry Pi and write a program to print temperature and humidity readings on it.
8.	To interface Bluetooth with Arduino/Raspberry Pi and write a program to send sensor data to smartphone using Bluetooth.
9.	To interface Bluetooth with Arduino/Raspberry Pi and write a program to turn LED ON/OFF when '1'/'0' is received from smartphone using Bluetooth.
10.	Write a program on Arduino/Raspberry Pi to upload temperature and humidity data to thingspeak cloud.
11.	Write a program on Arduino/Raspberry Pi to retrieve temperature and humidity data from thingspeak cloud.
12.	To install MySQL database on Raspberry Pi and perform basic SQL queries.
13.	Write a program to create UDP server on Arduino/Raspberry Pi and respond with humidity data to UDP client when requested.
14.	Write a program to create TCP server on Arduino/Raspberry Pi and respond with humidity data to TCP client when requested.

#### LIST OF SUGGESTED BOOKS:

Scheme & Syllabus

IV Year- VII & VIII Semester: B. Tech. (Electronics Instrumentation & Control)

## 8EI4- 22 Skill Development Lab

Credit:1

Max. Marks : 50 (IA:30,ETE:20)

OL+OT+2P

### Part A: Training

SN	Contents
1	Introduction: Objective, scope and outcome of the lab.
	<b>Every student has to learn any two software from the following list, with consultation of their lab in charge. Students may get online certification or is advised to learn these from available freeware. Students may register online training courses from institutes of repute i.e. IITs/NITs/AICTE/MHRD, etc. Industrial experts /professional may be deputed to train the students in department.</b>
1	Network simulator (NS <sub>2</sub> )
2	Lab view
3	Software for Robotics/Artificial intelligence (AI) /machine learning
4	Java
5	Python

### PART B: Implementation

SN	Contents
1	<b>Student has to complete any one assignment with detailed project report based on the software/tool learn in part A.</b>
2	Student can select any Social engineering project: Any problem of the society can be taken which can be solved with the help of electronics engineering software and gadgets.
3	Student can select Startup for innovation/entrepreneurship.
4	Engineering solution of any Industrial problem. Sufficient number of such problem may be identified by the department from nearby industry and may be given to the student for innovative solutions under guidance of faculty.
	<b>This lab may be evaluated by an external examiner from industry along with internal faculty.</b>
