| 2  | **Set Theory**: Definition of sets, countable and uncountable sets, Set operations, Partition of set, Cardinality (Inclusion-Exclusion & Addition Principles) Venn Diagrams, proofs of some general identities on sets.  
**Function**: Definition, type of functions, one to one, into and onto function, inverse function, composition of functions, recursively defined functions, pigeonhole principle.  
Theorem proving Techniques: Mathematical induction, Proof by contradiction. Composition of Functions.  
The Pigeonhole and Generalized Pigeonhole Principles. | 7     |
| 3  | **Propositional Logic**: Proposition, First order logic, Basic logical operation, truth tables, tautologies, Contradictions, Algebra of Proposition, logical implications, logical equivalence, predicates, Normal Forms, Universal and existential quantifiers. 2 way predicate logic.  
Introduction to finite state machine Finite state machines as models of physical system equivalence machines, Finite state machines as language recognizers. | 8     |
| 4  | **Posets, Hasse Diagram and Lattices**: Introduction, ordered set, Hasse diagram of partially, ordered set, isomorphic ordered set, well ordered set, properties of Lattices, bounded and complemented lattices.  
**Combinatorics**: Introduction, Permutation and combination, Binomial Theorem, Multimodal Coefficients Recurrence Relation and Generating Function: Introduction to Recurrence Relation and Recursive algorithms, linear recurrence relations with constant coefficients, Homogeneous solutions, Particular solutions, Total solutions, Generating functions, Solution by method of generating functions. | 8     |
| 5  | **Algebraic Structures**: Definition, Properties, types: Semi Groups, Monoid, Groups, Abelian group, properties of groups, Subgroup, cyclic groups, Cosets, factor group, Permutation groups, Normal subgroup, Homomorphism and isomorphism of Groups, example and standard results, Rings and Fields: definition and standard results. | 8     |
| 6  | **Graph Theory**: Introduction and basic terminology of graphs, Planer graphs, Multigraphs and weighted graphs, Isomorphic graphs, Paths, Cycles and connectivity, Shortest path in weighted graph, Introduction to Eulerian paths and circuits, Hamiltonian paths and circuits, Graph coloring, chromatic number, Isomorphism and Homomorphism of graphs, matching, vertex/edge covering. | 8     |

Total: 40
**4CAI1-03/3CAI1-03: Managerial Economics and Financial Accounting**

Credit-2  
2L+0T+0P  
Max. Marks : 100(IA:30, ETE:70)  
End Term Exam: 2 Hours

<table>

| 2  | **Basic economic concepts**-  
Meaning, nature and scope of economics, deductive vs inductive methods, static and dynamics, Economic problems: scarcity and choice, circular flow of economic activity, national income-concepts and measurement. | 3     |
| 3  | **Demand and Supply analysis**-  
Demand-types of demand, determinants of demand, demand function, elasticity of demand, demand forecasting –purpose, determinants and methods, Supply-determinants of supply, supply function, elasticity of supply. | 5     |
| 4  | **Production and Cost analysis**-  
Theory of production- production function, law of variable proportions, laws of returns to scale, production optimization, least cost combination of inputs, isoquants. Cost concepts-explicit and implicit cost, fixed and variable cost, opportunity cost, sunk costs, cost function, cost curves, cost and output decisions, cost estimation. | 5     |
| 5  | **Market structure and pricing theory**-  
Perfect competition, Monopoly, Monopolistic competition, Oligopoly. | 4     |
| 6  | **Financial statement analysis**-  
Balance sheet and related concepts, profit and loss statement and related concepts, financial ratio analysis, cash-flow analysis, funds-flow analysis, comparative financial statement, analysis and interpretation of financial statements, capital budgeting techniques. | 8     |

**TOTAL** 26
### 4CAI1-02/3CAI1-02: Technical Communication

**Credit-2**

**SN** | **CONTENTS** | **Hours**
--- | --- | ---
1 | **Introduction**: Objective, scope and outcome of the course. | 1
2 | **Introduction to Technical Communication**: Definition of technical communication, Aspects of technical communication, forms of technical communication, importance of technical communication, technical communication skills (Listening, speaking, writing, reading), linguistic ability, style in technical communication. | 3
3 | **Comprehension of Technical Materials/Texts and Information Design & development**: Reading of technical texts, Reading and comprehending instructions and technical manuals, Interpreting and summarizing technical texts, Note-making. Introduction of different kinds of technical documents, Information collection, factors affecting information and document design, Strategies for organization, Information design and writing for print and online media. | 6
4 | **Technical Writing, Grammar and Editing**: Technical writing process, forms of technical discourse, Writing, drafts and revising, Basics of grammar, common error in writing and speaking, Study of advanced grammar, Editing strategies to achieve appropriate technical style, Introduction to advanced technical communication. Planning, drafting and writing Official Notes, Letters, E-mail, Resume, Job Application, Minutes of Meetings. | 8
5 | **Advanced Technical Writing**: Technical Reports, types of technical reports, Characteristics and formats and structure of technical reports. Technical Project Proposals, types of technical proposals, Characteristics and formats and structure of technical proposals. Technical Articles, types of technical articles, Writing strategies, structure and formats of technical articles. | 8

**TOTAL** | **26**

4CAI4-21: Microprocessor & Interfaces Lab

Credit: 1
0L+0T+2P

List of Experiments:

1. Add the contents of memory locations XX00 & XX01 & place the result in memory location XX02.
2. Add the 16 bit numbers stored in memory location & store the result in another memory location.
3. Transfer a block of data from memory location XX00 to another memory location XX00 in forward & reverse order.
4. Write a program to swap two blocks of data stored in memory.
5. Write a program to find the square of a number.
6. Write a main program and a conversion subroutine to convert Binary to its equivalent BCD.
7. Write a program to find largest & smallest number from a given array.
8. Write a program to Sort an array in ascending & descending order.
9. Write a program to multiply two 8 bit numbers whose result is 16 bit.
10. Write a program of division of two 8 bit numbers.
11. Generate square wave from SOD pin of 8085 & observe on CRO.
12. Write a program to perform traffic light control operation.
13. Write a program to control the speed of a motor.
4CAI4-22: Database Management System Lab

Credit: 1.5  
Max. Marks: 100(IA:60, ETE:40)
OL+0T+3P

List of Experiments:

1. Design a Database and create required tables. For e.g. Bank, College Database
2. Apply the constraints like Primary Key, Foreign key, NOT NULL to the tables.
3. Write a SQL statement for implementing ALTER, UPDATE and DELETE.
4. Write the queries to implement the joins.
5. Write the query for implementing the following functions: MAX(), MIN(), AVG() and COUNT().
6. Write the query to implement the concept of Integrity constrains.
7. Write the query to create the views.
8. Perform the queries for triggers.
9. Perform the following operation for demonstrating the insertion, updation and deletion
10. Using the referential integrity constraints.
11. Write the query for creating the users and their role.

Data Base Designing Project:

For better understanding students (group of 3-4 students) should design database for any data base project, understand the requirement and design methodology of project by its own.

Some example of data base design project like:

College management system, Inventory management system and Hospital management system.
4CAI4-23: Network Programming Lab

Credit: 1.5  
Max. Marks: 100(IA:60, ETE:40)  
0L+0T+3P

**List of Experiments:**

1. Study of Different Type of LAN& Network Equipments.
2. Study and Verification of standard Network topologies i.e. Star, Bus, Ring etc.
3. LAN installations and Configurations.
4. Write a program to implement various types of error correcting techniques.
5. Write a program to implement various types of framing methods.
6. Write two programs in C: hello_client and hello_server
   a. The server listens for, and accepts, a single TCP connection; it reads all the data it can from that connection, and prints it to the screen; then it closes the connection
   b. The client connects to the server, sends the string “Hello, world!”, then closes the connection
7. Write an Echo_Client and Echo_server using TCP to estimate the round trip time from client to the server. The server should be such that it can accept multiple connections at any given time.
8. Repeat Exercises 6 & 7 for UDP.
9. Repeat Exercise 7 with multiplexed I/O operations.
### 4CAI4-24: Linux Shell Programming Lab

**Credit:** 1  
**Max. Marks:** 100(IA: 60, ETE: 40)  
**OL+OT+2P**

<table>
<thead>
<tr>
<th>List of Experiments:</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Use of Basic Unix Shell Commands: <code>ls</code>, <code>mkdir</code>, <code>rmdir</code>, <code>cd</code>, <code>cat</code>, <code>banner</code>, <code>touch</code>, <code>file</code>, <code>wc</code>, <code>sort</code>, <code>cut</code>, <code>grep</code>, <code>dd</code>, <code>dfspace</code>, <code>du</code>, <code>ulimit</code>.</td>
</tr>
<tr>
<td>2. Commands related to inode, I/O redirection and piping, process control commands, mails.</td>
</tr>
</tbody>
</table>
| 3. Shell Programming: Shell script based on control structure- **If-then-fi, if-then-else-if, nested if-else, to find:**  
  3.1 Greatest among three numbers.  
  3.2 To find a year is leap year or not.  
  3.3 To input angles of a triangle and find out whether it is valid triangle or not.  
  3.4 To check whether a character is alphabet, digit or special character.  
  3.5 To calculate profit or loss. |
| 4. Shell Programming - Looping- while, until, for loops  
  4.1 Write a shell script to print all even and odd number from 1 to 10.  
  4.2 Write a shell script to print table of a given number  
  4.3 Write a shell script to calculate factorial of a given number.  
  4.4 Write a shell script to print sum of all even numbers from 1 to 10.  
  4.5 Write a shell script to print sum of digit of any number. |
| 5. Shell Programming - case structure, use of break  
  5.1 Write a shell script to make a basic calculator which performs addition, subtraction,  
      Multiplication, division  
  5.2 Write a shell script to print days of a week.  
  5.3 Write a shell script to print starting 4 months having 31 days. |
| 6. Shell Programming - Functions  
  6.1 Write a shell script to find a number is Armstrong or not.  
  6.2 Write a shell script to find a number is palindrome or not.  
  6.3 Write a shell script to print Fibonacci series.  
  6.4 Write a shell script to find prime number.  
  6.5 Write a shell script to convert binary to decimal and decimal to binary  
  7. Write a shell script to print different shapes- Diamond, triangle, square, rectangle, hollow square etc. |
| 8. Shell Programming – Arrays  
  8.1 Write a C program to read and print elements of array.  
  8.2 Write a C program to find sum of all array elements.  
  8.3 Write a C program to find reverse of an array.  
  8.4 Write a C program to search an element in an array.  
  8.5 Write a C program to sort array elements in ascending or descending order. |
Credit: 1
0L+0T+2P

Max. Marks: 100(IA:60, ETE:40)

List of Experiment:

1. Develop an in depth understanding of programming in Java: data types, variables, operators, operator precedence, Decision and control statements, arrays, switch statement, Iteration Statements, Jump Statements, Using break, Using continue, return.
2. Write Object Oriented programs in Java: Objects, Classes constructors, returning and passing objects as parameter, Inheritance, Access Control, Using super, final with inheritance Overloading and overriding methods, Abstract classes, Extended classes.
3. Develop understanding to developing packages & Interfaces in Java: Package, concept of CLASSPATH, access modifiers, importing package, Defining and implementing interfaces.
4. Develop understanding to developing Strings and exception handling: String constructors, special string operations, character extraction, searching and comparing strings, string Buffer class. Exception handling fundamentals, Exception types, uncaught exceptions, try, catch and multiple catch statements. Usage of throw, throws and finally.
5. Develop applications involving file handling: I/O streams, File I/O.

Indicative List of exercises:

7. Programs to demonstrate basic concepts e.g. operators, classes, constructors, control & iteration statements, recursion etc. such as complex arithmetic, matrix arithmetic, tower of Hanoi problem etc.
8. Development of programs/projects to demonstrate concepts like inheritance, exception handling, packages, interfaces etc. such as application for electricity department, library management, ticket reservation system, payroll system etc.
9. Development of a project to demonstrate various file handling concepts.
10. Develop applications involving Applet: Applet Fundamentals, using paint method and drawing polygons. It is expected that each laboratory assignments to given to the students with an aim to In order to achieve the above objectives.
